Pumping System

We use top-quality materials

compliant with government standards
(WWPR regulation)

- Consultation and pumping system design, maintenance and repair
- Submersible pump, constant pressure system, jet pump, turbine pump
- Raw Water intake

Water Analysis and Treatment

Our specialists are certified:

- OCARE (Water intake and basic drinking water systems)
- OTUFD (Groundwater treatment with filtration and distribution network)
- Physico-chemical and bacteriological analysis
- Sale, installation and maintenance of equipment
- Expertise in agriculture and greenhouses

The Experteau Integrated Approach Advantage

From installation to maintenance, from supply to distribution systems, from analysis to water treatment, we provide a complete overview to cover all aspects and achieve the best water quality.

Global vision

We design the well based on the treatment and distribution that will follow.

Long-term savings

A better built well reduces wear on your pumps and maintenance of your filtration systems.

Single point of contact

From drilling to final compliance analysis, you benefit from total synergy.
